

## Saint Louis University West Pedestrian Mall

Saint Louis, MO

The West Pedestrian Mall design converts 3 blocks of existing streets into pedestrian open space through the west half of the campus. The Mall is an extension of the existing central campus mall. The new Mall consists of a central plaza, with a clock tower and an amphitheater, connected to a series of smaller plazas and green spaces by tree lined walks. ATA was responsible for the master planning and design development phases of the Mall, and provided the planting and irrigation design for the construction document phase.
